

Software solutions for BOS, works fire brigades, municipalities, nursing services, ambulance services and companies, to name but a few

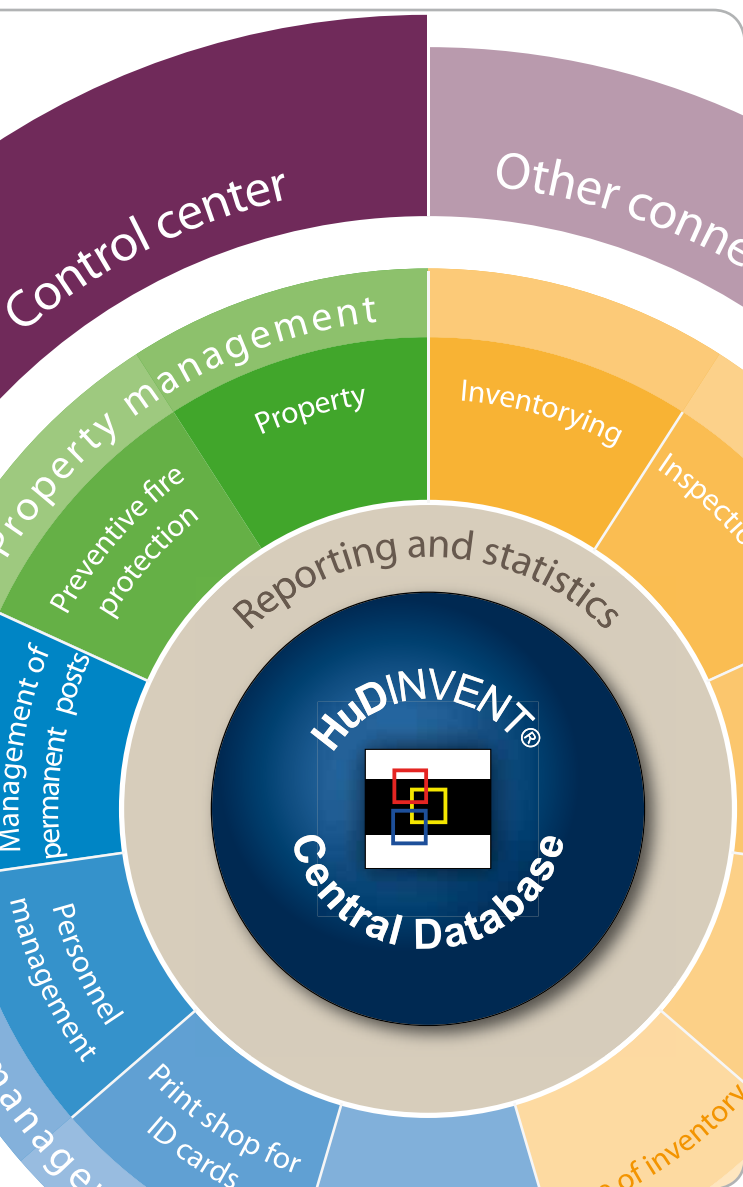

H&D 

International Group

Why it pays to use HuD/INVENT®

As companies and organizations continue to grow, they are faced with the challenge of capturing data in a standardized form about inventories, properties and employees, as well as the interconnections between them.

With the central information and control system **HuD/INVENT®**, inventory and property management as well as HR management can be carried out using a master data collection system that can be extended to meet all requirements. You record the data just once and it is available for use immediately in all systems. What is more, relationships and classifications can be displayed using our software solution.

From its inception **HuD/INVENT®** was developed in close collaboration with fire brigades, works fire brigades and emergency services to ensure that their requirements were fully taken into account, with IT know-how being applied in a practical way to address customers' needs - a perfect interaction of IT know-how and business needs.

HuD/INVENT® can be used as a central information hub for connected systems. Fire brigades, emergency services, control centers and other related organizations can link up with each other using the **HuD/INVENT®** database.

How HuD/INVENT® will benefit your business:

- **HuD/INVENT®** meets your requirements of a quality management system.
- Your stored data is saved in documentation that will stand up in court.
- You need to work at only one central database.
- You have quick and direct access to data and reports.
- The software can be easily operated by your employees.
- The system is paperless so you save on costs for paper.
- You can locate your stocks quickly and reliably.
- You can make significant savings with the warehouse resources monitoring.
- Speedier operational procedures and processes.
- You can optimize your work by means of a secure and user-friendly data management system.

What you can expect of HuD/INVENT®:

- ✓ Acceptance by the users
- ✓ User-friendliness
- ✓ Economy
- ✓ Networkability
- ✓ Stability
- ✓ Flexibility
- ✓ Compatibility
- ✓ Future-proof
- ✓ An expandable modular system
- ✓ Software for the emergency services
- ✓ Foolproof data capture
- ✓ Hardware checks and documentation
- ✓ A system you can use wherever you are

Functions

HuD/INVENT® supports large sectors of your administrative tasks. Inventorying, property management, reporting and HR management processes are simplified because data has to be recorded only once, master data collection systems can be extended to meet all requirements and allocation of resources can be made using the Bar code client.

- Record and manage all relevant data about equipment, vehicles, locations, inventory and employees.
- Allocate users individual rights of access with the integrated authorization system.
- Draw up plans and work reports for inspecting and repairing equipment and manage goods in stock with target amounts, low-level warnings and minimum amounts.
- Inventory and check on site or record changes of location of an inventory with the user-friendly mobile wireless recording devices with touchscreen.
- Allocate stocks (e.g. clothing, EDP systems, office equipment) to your employees with bar code protection. **HuD/INVENT®** offers a master data collection system that can be extended to meet all needs for successful HR management.
- Manage property and buildings. The information about property assists, for example, in facility management and in allocating the

inventory. A corresponding reporting system that you can use on a mobile basis is available for this purpose.

- You can work using the handscanner at all times with no need to input multi-digit figures and letter codes. Just press a button for foolproof recording of the identification code of an inventory.
- Plan the use of your employees in the work scheduling module in conjunction with the HR management module.

You can use **HuD/INVENT®** for the following purposes:

- ✓ Inventorying
- ✓ Authorization systems
- ✓ Integrated equipment and inventory management
- ✓ Reporting systems and documentation that will stand up in court
- ✓ Data capture irrespective of your location, data management and data recall
- ✓ HR management and allocation of equipment and service clothing to employees
- ✓ Building management
- ✓ Bar code recognition & RFID identification
- ✓ Accounting entries
- ✓ Work scheduling

Technical requirements and possibilities

The **HuD/INVENT®** clients can be run on PCs, notebooks as well as on Tablet PCs with an operating system from and including Microsoft Windows XP. The **HuD/INVENT®** server required needs an operating system from and including Microsoft Windows Server 2003 or Microsoft Windows XP. The operating systems that can be used depend on the version of the database used. **HuD/INVENT®** requires a Microsoft SQL Server 2005 Express for small organizations that are not obliged to work using a mobile device and without a data connection. Larger scale solutions are possible with a Microsoft SQL-Server 2005 Standard and higher.

Alternatively, **HuD/INVENT®** can be provided as a terminal server application. This is particularly suitable for local scenarios in which diverse branches or customers are to be integrated into the overall solution irrespective of the IT technology on site. In addition, branches that are

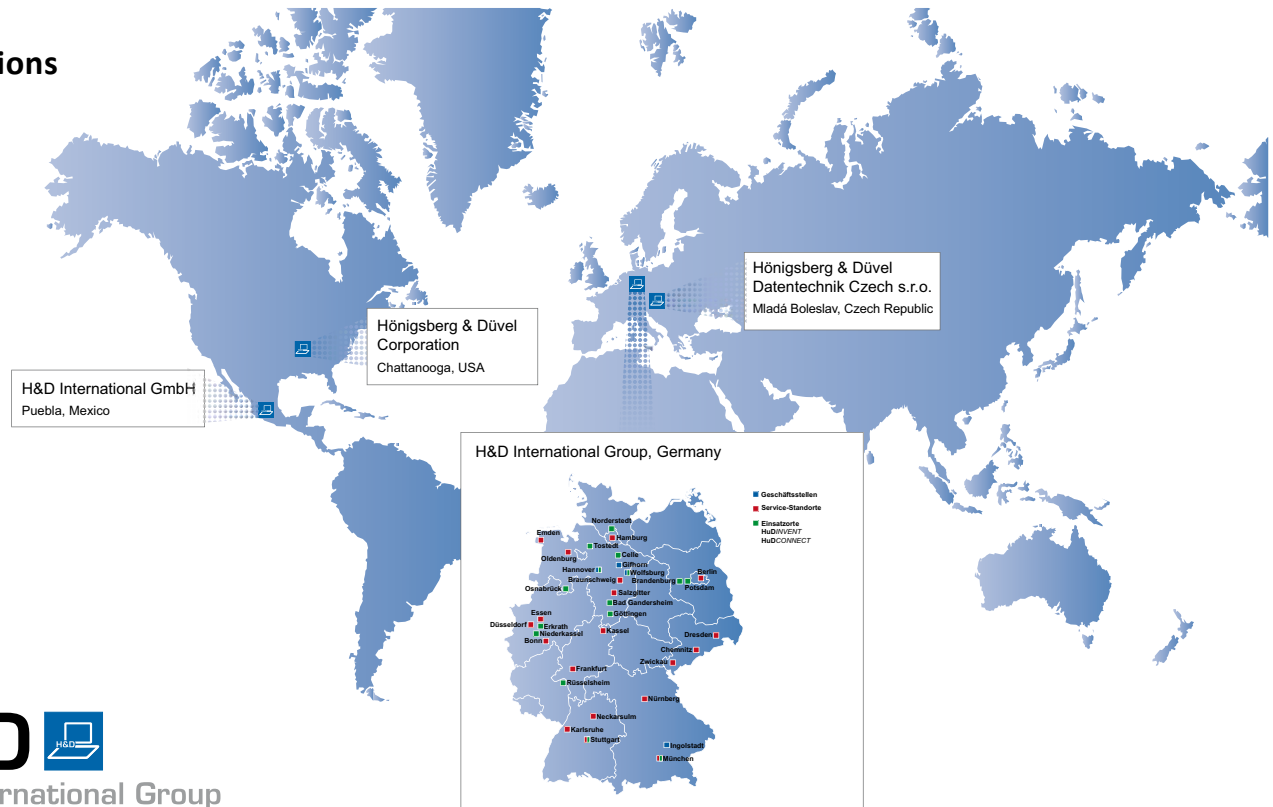

not integrated in their own network can be integrated via the Terminal Server. A Microsoft Windows Server 2008 will be required for operating **HuD/INVENT®** in this scenario. The branches to be integrated will require an Internet connection.

Dependent on which **HuD/INVENT®** functions you require, you will need a:

- radio scanner for reading the bar codes
- bar code printer for printing bar code labels
- thermopress for applying the bar codes to textiles

We will be pleased to help you in obtaining suitable hardware. We have been working together successfully with our solution partners for years.

Company profile

The H&D International Group is one of the new generation of integrated, globally active IT service providers. The company has its headquarters in Wolfsburg and has over 20 branches. We have operated successfully in the market for more than 10 years, and now employ over 1,200 staff on an extremely wide range of IT projects. Our company combines the background experience of an international large company with the flat hierarchical structures, flexibility and responsiveness of a medium-sized company.

The factors that have made us a success also ensure customer satisfaction:

- Sound, wide-ranging know-how acquired from carrying out large-scale projects
- Many years of experience in project management
- In-depth understanding of our customers' needs and the importance of service to the customer
- Our company ethos and the personal commitment of all our employees
- The confidence in us our customers have shown over many years
